Business intelligence tools

This article highlights business intelligence tools that integrate with Databricks.

Built-in tools

The following tools are available in the Databricks UI, to users with the Databricks SQL entitlement. Users with elevated privileges can manage entitlements for other users. See [Manage entitlements](#).

Genie Spaces

Genie Spaces are conversational workspaces powered by Genie where users can ask questions about their data in natural language. Data teams can configure Genie Spaces based on their organization's terminology, datasets, and trusted logic, allowing business users to go beyond dashboard reporting without requiring technical expertise or assistance.

For more details, see [What is a Genie Space](#). To learn how to create a Genie Space, see [Create and manage a Genie Space](#).

AI/BI dashboards

Databricks provides integrated dashboards for building interactive visualizations from your data. These dashboards support features like:

- Streamlined organization-wide sharing
- AI-assisted authoring
- Multi-page reporting
- Auto-generated companion Genie Spaces
- Secure sharing through embedding in third-party applications

 Ask Genie

For more details, see [Dashboards](#). To create your first dashboard, try [Create a dashboard](#).

Query and visualize data using partner tools

Third-party business intelligence tools such as Tableau and Power BI can connect to Databricks, which allows you to create visualizations using familiar interfaces. The following table includes links to set up connections with various third-party tools:

Partner	Steps to connect
	Connect to Hex using Partner Connect
 Microsoft Power BI	Connect to Databricks using Partner Connect
	Connect to Preset using Partner Connect
	Connect to Qlik Sense using Partner Connect
	Connect to Sigma using Partner Connect
	Connect Databricks to Tableau Desktop using Partner Connect
	Connect to ThoughtSpot using Partner Connect

To learn more about Databricks technology partners for BI and visualization tools, see [Technology partners](#). For general guidance on connecting with third-party BI and visualization tools using Partner Connect, see [Connect to BI partners using Partner Connect](#).

Connect to Databricks

Databricks supports integrations using Java Database Connectivity (JDBC) and Open Database Connectivity (ODBC), which are industry-standard specifications for accessing database management systems. These standards ensure secure, high-performance data connectivity across a wide range of tools and applications. Use the following resources for setup and usage instructions:

- **Databricks ODBC Driver:** Establish ODBC connections to Databricks.
- **Databricks JDBC Driver:** Set up JDBC integrations with compatible tools and applications.

For a complete list of SQL development tools compatible with Databricks, see [SQL connectors, libraries, drivers, APIs, and tools](#).
